Summary

Recently graduated VFX artist with a strong technical background in Physics and Computer Science. My primary focus is **procedural simulation and tool creation in Houdini**—if a standard node doesn't exist, my programming background allows me to build custom solutions and solvers from scratch. I complement this with secondary expertise in **Nuke compositing** and broad training across the wider VFX pipeline, including creature **modeling, texturing and rigging**. I aim to bridge the gap between creative vision and complex technical systems and build grounded, tangible visuals and efficient, reliable workflows for production.

Education

Bournemouth University	BA
Visual Effects	Bournemouth, UK • Sept 2023 – June 2026 (Expected)
University of Chinese Academy of Science	BSc(Coursework Completed)
Computer Science	Beijin, China • Sept 2020 - June 2023

Projects

- Procedural Tentacle System for Artists (Houdini HDA)**
- Developed a highly customizable Houdini Digital Asset for procedural growth and animation of organic tentacles suitable for complex terrain.
- Meteor Impact & Destruction (Final Major Project FX)**
- An art-directed, physically accurate 3-meter radius meteor impact, utilizing Pyro and POP simulations to achieve specific narrative timing and environmental interaction.
- ‘Brain-Squid’ Creature Integration**
- A full-pipeline project integrating a multi-solver creature simulation (Vellum, FEM, FLIP) into a self-shot live-action plate, covering the process from matchmoving to final compositing.

Technial Skills

- 🔧 **FX Simulation & Technical Direction**
- Houdini, Pyro, Vellum, Flip, RBD, HDA Creation, KineFX & Apex Rigging, Procedural Animation, Solaris Setup & Karma rendering
- ▶ **Compositing & Integration**
- Nuke, CG Integration & Multi-Pass Compositing, Technical Grading & Color Science, Rotoscoping
- 📦 **3D Modeling & LookDev**
- Maya(Modeling & Rigging), Zbrush(Creature Modeling), Substance Painter(Texturing), V-Ray, Arnold
- 📄 **Coding**
- VEX, Python, C
